Information for Contributors

Send manuscripts to the Editors, *The Physical Review*, Brookhaven National Laboratory, Upton, N. Y. 11973.

Consult recent issues of this journal and the American Institute of Physics **Style Manual** (second revised edition, 1967) for the general format and style of articles. Specify section and index categories. [See Phys. Rev. **153**, 1728 (1967).]

The **manuscript**, including the abstract, references, and captions should be neatly typed in English, double spaced on good letter-size (8½ in. × 11 in.) white paper with ample margins to allow for editorial marking. It should be carefully proofread by the author for misspellings, grammatical errors, and missing symbols. Unclear or excessive handwritten insertions are not acceptable. A **duplicate** copy of the manuscript must be furnished.

The **title** should be concise but informative enough to facilitate information retrieval. The **abstract** should be self-contained for reprinting in Abstract Journals. It should be adequate as an index (giving all subjects, major and minor, about which new information is given) and as a summary (giving the conclusions and all results of general interest in the article). It should be about 5% of the length of the article but less than 500 words.

Equations should be neatly typed or written in ink, punctuated and aligned to bring out their structure, and numbered on the right. Mathematical operation signs indicating continuity of the expression should be placed at the left of the second and succeeding lines.

Notation should be chosen so as to be clear, compact, and consistent with standard usage. The prime requisite is that the copy be as clear as possible to the typesetter, who is neither a physicist nor a mathematician. To this end a certain amount of editorial copymarking is necessary. All unusual symbols should be identified the first time they are used, and at subsequent times when confusion might arise. Boldface symbols should be marked by a wiggly black underline always. Handwritten symbols should be identified as capital or lower case. Handwritten Greek symbols should be identified in the margin the first time and underscored in red later if confusion is possible. (This is particularly important for those symbols such as χ or κ which may look, when handwritten, like italic symbols, x or k; or for capital Σ and Π which can be confused with the summation or product symbols, themselves oversize special characters.) German, script, or sans-serif letters should be identified the first time in the margin and later underscored in green if they may be confused with other letters.

Because of the monotype system of typesetting used by *The Physical Review*, in which each character, on a separate piece of type, can only be placed adjacent to and not above or below another character, certain expressions cannot be handled. Superscripts cannot be placed above subscripts. In fact, superscripts should be placed after subscripts except where the meaning would be affected (e.g., in general relativity). Where there is doubt as to the position of the superscript or subscript, a sharp black-pencilled caret or inverted caret should be used to indicate the position. Bars cannot be placed over more than one symbol. Where the bar denotes an average we usually recommend the notation $\langle\ \rangle_{\rm Av}$ and where the bar is part of a root sign we require the use of fractional exponents. Also, special markings such as tildes, bars, carets, and dots cannot be placed over symbols unless that symbol with the appropriate marking already exists as a separate piece of type.

A list of the available symbols is given on pp. 21 through 26 of the AIP *Style Manual*. Note that if a symbol is available "on the line" it is not necessarily available as a superscript or subscript unless specifically indicated.

The solidus should be used instead of built-up fractions to save vertical space where clarity would not be jeopardized. This is of particular importance in the running text. Also the "exp" notation should be used where complicated exponents exist.

References *including comments* must be numbered consecutively in order of first appearance in the text and should be given in a separate double-spaced list at the end of the text material. References to tables should be designated by lower case roman letters and given at the end of the table. The proper form for references will be found on p. 7 of the AIP *Style Manual* and in recent issues of this journal.

Numbered **tables** should be used for all but the simplest tabular material; they should have suitable captions which make the tables intelligible without reference to the text. The table structure should be clear, with simple column headings giving all units. The tables should be numbered in the order in which they are referred to in the text.

Figures should be planned for the 3-in. column width of *The Physical Review*. In some cases where the figures contain a great deal of detail, 1½ or 2 columns may be used. The lettering and data points on the figures should be large and clear enough so that they will be legible after reduction (the final size should be at least $\frac{1}{16}$ in. $\sim$1.5 mm). Waste space at the top and bottom should be avoided. Figures should be numbered in the order in which they are referred to in the text. A separate list of captions should be supplied. The figure itself should have properly labeled axes with correctly abbreviated units. [For unit abbreviations see AIP *Style Manual*, pp. 9–11.] Figures should be identified on the back by the number, the name of the first author, and the journal.

Because of the zinc-etching or copper-halftone processes used in making figures, a maximum black-white contrast is necessary. We require original india-ink drawings or good, clear glossy prints. The latter are preferable to oversized originals. Avoid small open symbols which tend to fill in upon reduction, small dots which barely reproduce, and toned shading which fails to reproduce well in engraving. Photographs of apparatus are unacceptable and should be replaced by good schematic diagrams. For complete instructions on preparation of illustrations see AIP *Style Manual*, pp. 27–32.

After notification of acceptance, all correspondence regarding proofs, etc. should be addressed as follows: *Papers in Issue No. 1:* The Physical Review, 150 Central Ave., Farmingdale, L. I., N. Y. 11735; *Papers in Issues No. 2–5:* Supervisor, Editorial Department, American Institute of Physics, 335 East 45th Street, New York, N. Y. 10017. Reference *must* be made to journal, scheduled issue, title, and first author. Authors will be charged for alterations made in proof and, in the case of excessive alterations, the manuscript will be returned to the Editorial Office for reconsideration.

AMERICAN INSTITUTE OF PHYSICS

335 East 45 Street New York, New York 10017

THE American Institute of Physics was founded in 1931 as a federation of leading societies in the field of Physics. It combines into one operating agency those functions on behalf of physics that can best be done by the Societies jointly. Its purpose is the advancement and diffusion of the knowledge of physics and its application to human welfare. To this end, it publishes for itself or the Societies the 16 journals listed on this page, as well as the 13 translations of Soviet journals; promotes unity and effectiveness of effort among all who are interested in physics; renders numerous direct services to physicists and to the public; and cooperates with government agencies, national associations, educational institutions, technical industries, and others in such manner as to realize the opportunities and fulfill the responsibilities of physics as an important and constructive human activity.

MEMBER SOCIETIES:

The American Physical Society
W. W. HAVENS, JR., *Executive Secretary*, 335 East 45 Street, New York, N. Y. 10017

Optical Society of America
MARY WARGA, *Executive Secretary*, 2100 Pennsylvania Avenue NW, Washington, D. C. 20037

Acoustical Society of America

ANNOUNCEMENT

Increased Page Charges for the Physical Review

Sharply rising costs have made it necessary for the Council of the American Physical Society to raise the publication charge for papers published in *The Physical Review* from $60 to $75 per printed page. (This is the first such increase since January 1964.) The increased charge will take effect with the issues published in June 1969.

As before, an additional charge of $10 will be requested for publication of the abstract in *Physical Review Letters* and *Physics Abstracts*.

The publication charge for *Physical Review Letters* will remain at $60 per printed page, plus $10 per Letter for supporting abstracting and indexing services.
